-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claim 1-4, 7, 10, drawn to a method of localization or suppression of a fire, classified in class 169, subclass 43.
 - II. Claim 5-9, drawn to 169, classified in class 169, subclass 28.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the device requires a blasting fuse, a stabilizer, a releasing mechanism, forced-separating elements, a suspension system with structural elements interconnected by a faceplate with eye-rings connected to the stabilizer through a flexible link, where the release mechanism is made in the form of a sleeve with two longitudinal channels which one channel accommodates two spring-loaded pistons with rods and the other channel accommodating a gas producer the channels are closed at the end and are connected to each other forming chambers, and each rod of the piston being moveably connected to one of the structural elements, the forced-separating elements for forced separation of the suspension system from the container are made in the form of reed springs and the container, stabilizer, and body being made of thermoplastic polymer material. The method of suppression of fire does not require those specific components and therefore the product as claimed can be practiced with a materially different product.
